

Classic Use Case: Running Compiled Code

Your code

Precondition:

PL source code in a Github repo.

Need:

1. Module system and assoc. software.
2. Compiler.
3. Libraries (archives and so's).
4. Makefile.

Classic Use Case: Running Interpreted Code

Precondition:

PL source code in a Github repo.

Need:

1. Module system and assoc. software.
2. Virtual environment.
3. Packages.

Event: you build a container with your code.

Event: you share **your container** with another.

Concerns:

1. Module system---no.
2. Compiler---no.
3. Libraries---no.
4. Makefile---no.

Concerns:

1. Module system---no.
2. Virtual environment---no.
3. Packages---no.
